

Introduction to Typst

Typst is a modern, markup-based typesetting system that is as powerful as LaTeX but much easier to learn.

Key Features

- **Simple Syntax:** Use familiar markup for bold and *italic* text.
- **Readable Math:** Equations are clean. $a^2 + b^2 = c^2$. The quadratic formula is $x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$.
- **Scripting:** You can use variables and logic! Hello, World!
